International Truck Launches Newly Designed MV™ Series

The new MV Series was purposely designed for increased maneuverability, visibility and safety.

LISLE, III., Sept. 23, 2021 /PRNewswire/ - - Today, International Truck announced the launch of the new International® MV™ Series. This is the next generation of International's medium-duty vehicles, reimagined from the ground up to advance performance, safety and uptime.

"The new International MV Series features thoughtful design that includes premier

safety features, head-turning styling, simplified TEM integration and uptime enhancements," said Debbie Shust, vice president, Medium-Duty Truck. "We listened to customer feedback and developed a medium-duty vehicle that is custom built for all their needs."

Enhanced Safety and Styling

The new MV Series was purposely designed for increased maneuverability, visibility and safety. It is designed to stand out among International's product line. An aerodynamic hood and smartly designed breakaway mirrors provide superior visibility for drivers and the restyled bumper and black, molded-in-color grille with optional chrome surround deliver attention grabbing looks. The MV Series includes standard halogen headlights, with newly introduced, optional LED headlights to provide longer life and improved visibility.

Several optional collision mitigation enhancements are also available. The Bendix[®] Wingman[®] Fusion[™] System technology includes adaptive cruise, enhanced collision mitigation, multilane vehicle braking, stationary object alert, lane departure warning, and front radar and cameras. The Bendix BlindSpotter Collision Warning System is equipped with side object detection alert.

Ultimate Capability and Body Integration

The new International MV Series features numerous enhancements that increase the performance capability of the vehicle. The high efficiency cooling module eliminates mega-brackets enabling integrated front frame extensions and an improved snowplow upfit offering. Hood mounted splash panels and on-engine air cleaner provide improved under-hood access while an optional under-hood work light is available for improved visibility during daily maintenance checks. Smart chassis packaging changes allow for improved body integration and improved operating costs for a wide variety of applications.

The Diamond Logic[®] electrical system comes standard, allowing for customized programming for driver and equipment protection, ease of body integration and greater uptime. Hundreds of off the shelf features exist today for improved safety, examples of which include: driver safety with the inclusion of pre-trip light inspection, safety on the jobsite with external regen warning, and equipment protection with hydraulic oil power take-off (PTO) shutdown and an outrigger stowed interlock.

The MV Series offers two engine options, the Cummins $^{\text{\tiny B}}$ B6.7 and L9, with increased fuel efficiency as well as extended and aligned maintenance intervals.

Corrosion protection is also improved with InterCoat[®] ChemGuard standard on the cab floor as well as optional

LINE-X[®] offering for particularly tough environments.

Connectivity to Maximize Uptime

The new MV Series is supported through OnCommand $^{\circledR}$ Connection, Navistar's remote diagnostics system, offering the industry's most comprehensive portfolio of connected vehicle services. Customers have the option to receive real time information to protect their assets through GPS and geofencing capabilities as well as easy to understand and actionable vehicle health reports.

The new MV Series includes the option for customers to add International $^{\$}$ 360 – the service communications platform that makes it easier than ever to seamlessly communicate with the International service network and streamline the repair process.

"This is an evolution, rather than a departure, from our existing strategy," said Diane Hames, vice president, Marketing. "The new MV moves the International brand forward and is equipped with the features and technology to be an excellent fit for every customer."

The new International MV Series makes its first public appearance at the Utility Expo September 28-30 in Louisville, Kentucky at booth #N1135. To learn more about the all-new International MV Series, visit www.internationaltrucks.com.
