

Navistar Offers Fuel-Efficiency Savings With New Aftermarket Auxiliary Power Unit

Retrofit APU reduces fuel consumption, saving up to \$8,500 annually per truck

WARRENVILLE, Ill. (July 23, 2008) Truck owners and fleets can reduce fuel usage, lower emissions and comply with new anti-idling laws with the new Fleetrite® Auxiliary Power Unit (APU), a retrofit product introduced from Navistar.

"A Class 8 truck burns a little more than a gallon of diesel fuel per hour idling, and a long-haul sleeper idles around 2,400 hours per year," said Ron Sandefur, vice president, aftermarket purchasing and products, Navistar Parts Group. "Figure in the high price of diesel fuel and the result is a lot of wasted money.

"With a Fleetrite APU, truck owners can reduce fuel usage to only 0.3 gallons of fuel per hour while idling, or up to 80 percent less than normal idle, saving fleets and owner-operators up to \$8,500 a year and 1,920 gallons of fuel annually per truck," Sandefur said.

The Fleetrite APU is an auxiliary power unit designed as an aftermarket retrofit for all makes and models of Class 8 trucks. Powered by a 14-horsepower, 2-cylinder Caterpillar diesel engine, the unit takes the place of the engine under the hood to efficiently provide driver necessities including heat, air conditioning and power for electronics while the truck is idle.

"Even with the high price of diesel fuel, drivers don't have to sacrifice being comfortable while resting for the night or waiting for their trailers to get loaded or unloaded," said Jan Penrow, product manager, aftermarket products, Navistar Parts Group. "The Fleetrite APU delivers air conditioning, heat and power quickly and most importantly, without using a lot of fuel."

A simple and non-intrusive design, the Fleetrite APU only uses the truck's battery power and fuel tank to start and power its electronic system and run the engine.

The HVAC system of the Fleetrite APU delivers the most cooling and heating capacity on the market, ensuring drivers will be comfortable in any temperature conditions. A 60-Amp DC alternator charges the truck's battery while a 6-kW generator powers appliances and the engine-block heater. Mounted in the cabin of the truck, the control panel features a large LCD screen and easy-to-use single-touch menu functions.

Two CARB-compliant Fleetrite APU models are available depending on the truck's manufacture date. For 2007 or newer trucks, an APU model is available that requires a diesel particulate filter (DPF) for CARB compliance.

International® dealers also offer other anti-idling solutions as aftermarket retrofits including NITE™ battery powered systems, Espar cab heaters, Webasto cab heaters and Webasto C5 truck heating and cooling units, and Autotherm® energy-recovery units for day-cab trucks.

Navistar also will offer a factory-installed APU called MaxxPower™ as an option on new International® Class 8 trucks beginning later this year.

Navistar Parts Group is the parts distribution and sales organization of Navistar, Inc. The business includes global parts sales for International® trucks, buses and military vehicles, and Workhorse Custom Chassis, as well as Blue Diamond Parts and UpTime Parts. Navistar sells parts and support through its network of 1,100 dealers in 50 countries throughout the world.

Navistar International Corporation (NYSE: NAV), a Fortune 500 global company with roots stemming back more than 175 years, produces International® brand commercial and military trucks, MaxxForce™ brand diesel engines, IC brand school and commercial buses, and Workhorse® brand chassis for motor homes and step vans. It also is a private-label designer and manufacturer of diesel engines for the pickup truck, van and SUV markets. The company also provides truck and diesel engine parts and service. Another affiliate offers financing services. Additional information is available at www.Navistar.com/Newsroom.
